

PHOENIX, ARIZONA – (Disclosure & News Service – September 16, 2021) – PetroSun, Inc (OTC PINK: PSUD) PetroSun is pleased to report that Compania Minera La Meseta has obtained the executed documents regarding four additional mining concessions in Chihuahua, Mexico. These concessions are located within the contiguous fairway of zeolite clay deposits as the previously announced San Judas I and San Judas II mining concessions. Teche Mining LLC, a wholly-owned subsidiary of PetroSun, holds a 77.5% equity position in Compania Minera La Meseta.

The Company announced on April 19, 2021 that the San Judas I and San Judas II concessions recorded a reserve base of 136,444,240 tons of zeolite clay from the surface to 150 feet, with an average lithium concentration of 1,763ppm. The San Judas I and San Judas II cover a combined 259 hectares or 640 acres.

The four additional concessions that are contiguous to the San Judas I and San Judas II boundaries contain 1,044 hectares or 2,579.78 acres. These four new concessions should substantially increase Compania Minera La Meseta's zeolite clay reserves that are projected to contain commercial concentrations of lithium and other minerals. The Company is planning a four well coring program that will drill to 300 feet or the basement of the zeolite clays, whichever is greater, to obtain the assay data required for a zeolite clay and lithium reserve report.

The Company plans to utilize patented technology to process the lithium from the zeolite clay to battery grade or higher quality. The Company has entered into an agreement to commence the manufacturing of an initial processing system and it expects this system to begin operations during 2022.

The Company continues to engage in high level discussions regarding off-take or purchase agreements for the processed lithium (batteries) and zeolite clays (agriculture).

About PetroSun

PetroSun, Inc is a leading U.S. based strategic technology and natural resource company focused on near-term commercialization of Company owned helium assets in the Southwest U.S. Recognizing the increased global demand for helium by key growth industries such as health, space, technology, semiconductors and fiber optics, the Company has acquired and is developing over 264,000 acres of oil, gas, helium and mineral leases in the Holbrook Basin of Arizona and in the Paradox Basin of Utah, both historically prolific areas of commercial helium reserves. Helium is a rare inert gas that is non-flammable, environmentally friendly and when liquified is the coldest known liquid. Helium is scarce in supply and the helium market reflects increasing demand and dwindling helium reserves maintained by the US government, which has been selling down reserve volumes. These actions have diminished the US helium supply which was once over 40% of total global supply, with the remaining key producers being Algeria, Qatar and Russia.

The Company also owns important oil, natural gas and other clean energy resources and technology that will add to its overall growth and value including multiple lithium projects and process technologies that are in an advanced stage of development.

The key objectives of the overall Company Plan include the expected commercialization of both helium and strategic lithium assets with an emphasis on profitability, continued development of its Technology and Renewables projects, and encouraging sustainability, community responsibility and national security.
